

Connect 13 update 3

RELEASE NOTES

1. New features

1.1. Timeout feature for delivery connections

Connection time-out length can be adjusted in the delivery preset and in Connector preferences for FTP and HTTP connections.

1.2. Support for InDesign books

“Export to Connector” can now support documents that use the Book feature.

1.3. Windows OS Connectors enhanced

To avoid unnecessary virus protection warnings, internal components of a Connector have been signed with the Enfocus developer’s signature.

2. System requirements and compatibility

2.1. New Plug-in support for Adobe CC 2015

As from Connect 13 update 3, the plug-ins support the latest version of the Adobe Creative Cloud applications: 2015.3.

2.2. Dropped plug-in support for Adobe CS5 and CS6

Adobe CS5 and CS6 plug-ins for Connect are no longer supported. Although the plug-ins will continue work with Connect 13 update 3 Connectors, this has not been verified and we will no longer support issues on these versions from Connect 13 update 3.

2.3. PitStop Library 13 update 2 support

Connect YOU and ALL 13 update 3 now have the latest version of PitStop Library inside. This means Connect is now compatible with the ISO/DIS19593-1 Processing Steps standard as well as other Preflight checks for packaging production.

3. Resolved customer issues

BZ 34378	File name containing special characters were not supported when compressing (ZIP) jobs.
BZ 34084	Connect ALL 13.3 connectors do not properly upgrade on a Windows OS machine upgraded to Windows 10.
ENFC 3954/4298	The default value of “none” is not honored in the job ticket field.
ENFC 4148	A connector cannot be created when the user folder is using a Kanji font.
ENFC 4091	Job ticket field parent/child dependencies do not work when items were selected out of order.
ENFC 4082	Additional checks needed to ensure multiple levels of child fields in a job ticket are only shown when the parent field is visible.
ENFC 4054	Submission of custom parameters (using GET) on HTML Job ticket page load is not supported.
ENFC 3855	Sample HTTP web script is not available in the documentation.
ENFC 3826	Dropbox library updated to support submission of files exceeding 1GB.
